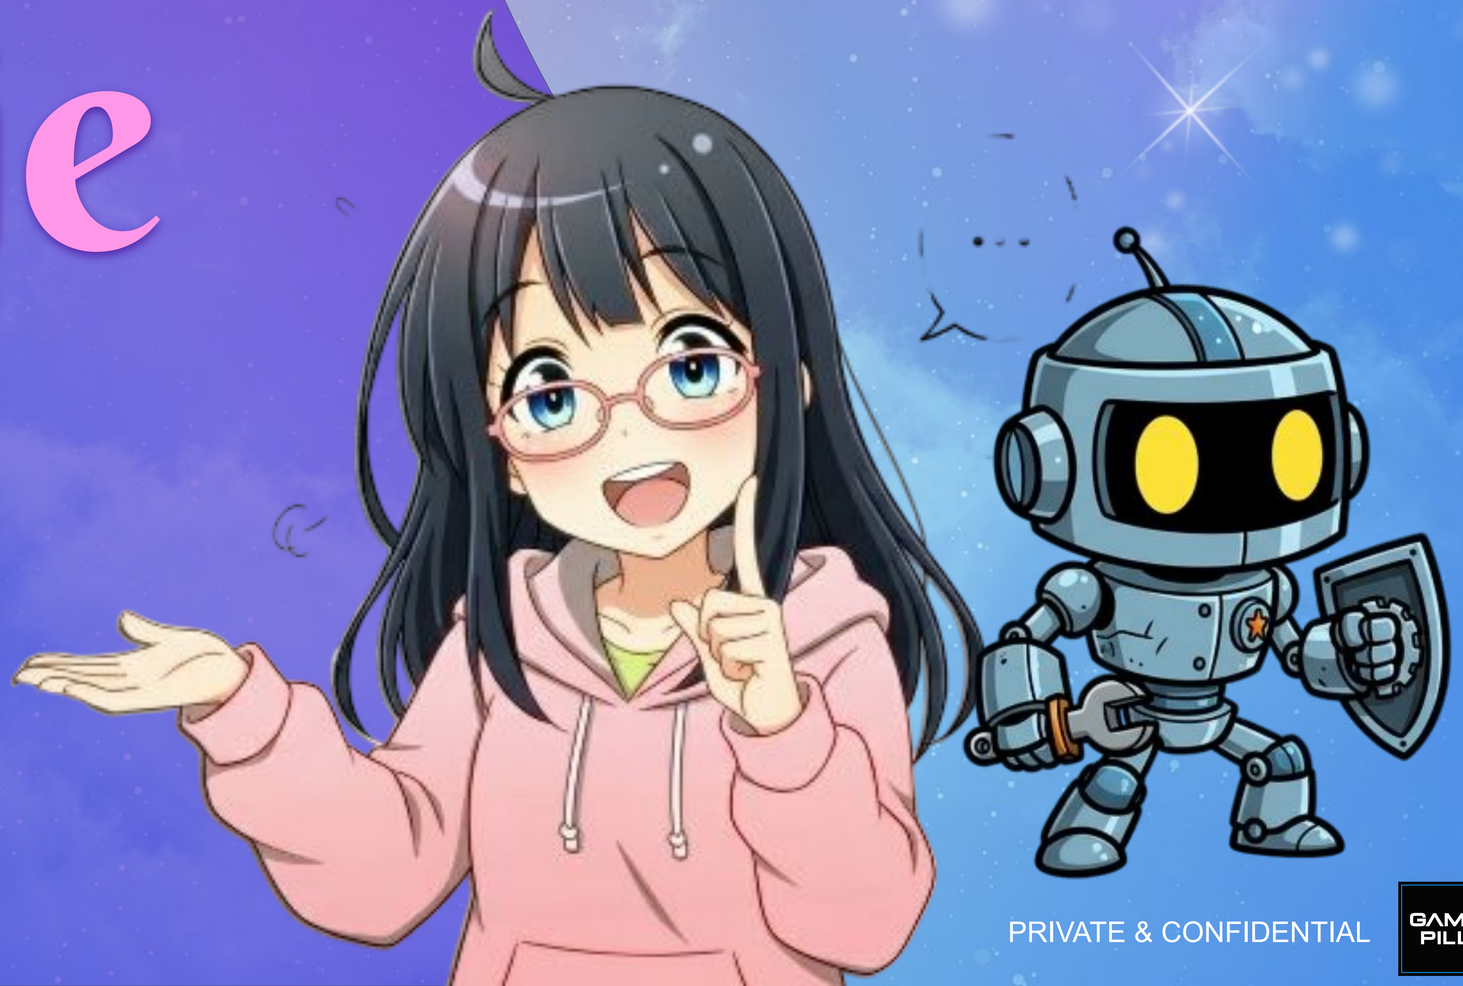
Talkie



PRIVATE & CONFIDENTIAL

GAME PILL

Overview

A platform where users create and customize unique avatars that can talk, interact, and even debate with each other—like a living digital stage.

For consumers, the platform is a playground for fun and entertainment: users can design avatars of friends, family, or entirely imagined characters, then watch them come to life in dynamic conversations. Every interaction can be recorded, shared, or remixed into short clips, turning spontaneous chats into social content and memorable experiences.

For enterprises, the platform becomes a versatile tool for customer engagement: companies can generate customer-facing avatars for education, entertainment, or practical assistance—like guiding travelers on a tourism website or providing interactive product demos. These avatars offer a personable, interactive way to inform, entertain, and support customers at scale.

The platform seamlessly blends creativity, engagement, and utility, letting both individuals and businesses harness the power of AI-driven personalities for fun, connection, and real-world impact.

Build Your Talkie

Choose from options to create your Talkie or create your own unique look.

PRIVATE & CONFIDENTIAL

Build Your Talkie

Build a persona:

Identity

Every character begins with the basics — their age, and what kind of being they are. Are they human, alien, robot, or something entirely new? Where do they come from, and what kind of environment shaped them — a small town, a distant planet, or a crowded futuristic city? What role do they play in their world: a detective, inventor, artist, student, or wanderer? Above all, what drives them — what do they want most and why? Understanding these core details grounds your character in reality and gives them a clear reason to exist.

Personality & Traits

A character's personality defines how they move through the world. Think about their temperament in three words — are they optimistic, stubborn, curious, or cautious? What values guide their decisions: honesty, freedom, power, love, or loyalty? Every character needs a balance of light and shadow — what do they fear, and what makes them proud? How do they react under stress, and what brings out their humor or anger?

Voice

The way a character speaks reveals as much as what they say. Do they talk in a formal, polite tone or use slang and sarcasm? Are their messages full of emojis, dramatic pauses, or quick comebacks? Some characters are storytellers, others are questioners or listeners. Think about their tone — friendly, mysterious, humorous, poetic, or robotic — and how quickly they respond in conversation. Y

Build Your Talkie

Build a persona:

Behavior

How do they behave around different people — kind and talkative with friends, cautious with strangers, or rebellious with authority? Do they naturally get along with others, or do they spark tension and conflict? Consider who they admire, who they distrust, and who might challenge them the most. How do they respond to conflict: by reasoning, joking, fighting, or walking away? Building relationships — friends, rivals, mentors, or sidekicks — gives your character emotional context and helps define how they interact in group conversations.

Backstory

What key event or turning point shaped their beliefs or habits? Is there a secret they've never revealed, or a personal loss they still carry? What dream or goal keeps them going even when things get hard? Finally, consider how they view the world around them — as a place of wonder, unfairness, humor, or mystery. These deeper motivations give every line of dialogue and every reaction more meaning, letting audiences sense that there's more beneath the surface.

Knowledge (ENTERPRISE)

For enterprise there is the ability to train your character to know all about your product or service.

PRIVATE & CONFIDENTIAL

Gameplay

Talkie will be built around three core pillars:

BUILD

Build Your Character
Envision and make the character you want to play with

TALK

Playing And Learning Together
Talk to each other. Share with friends. Watch interactions. Choose a mini-game to play together (charades, cards, trivia, drawing).

CUSTOMIZE

Friendship = Power
Earn or unlock outfits, hairstyles, and accessories.

PRIVATE & CONFIDENTIAL

Deploy

A platform where users create and customize unique avatars that can talk, interact, and even debate with each other—like a living digital stage.

For consumers, it's a tool for fun, sharing, and learning. Users can design avatars of friends, family, or entirely imagined characters and share the resulting interactions via a link, or embed them on websites or apps. Beyond entertainment, avatars can be trained to teach a subject, practice a language, or guide the user through personalized learning experiences.

For enterprises, the platform provides a powerful way to engage customers and employees. Companies can build avatars that embody their brand, delivering interactive experiences that educate, entertain, or assist. For example, avatars can help employees learn product features in an engaging way, or guide customers through practical tasks—like planning a family trip, choosing an outfit for a special event, or exploring a new product—all in the voice of the brand.

The platform combines creativity, interaction, and utility, letting individuals and organizations generate shareable, engaging, and educational experiences that live anywhere online—on social media, websites, or inside apps.

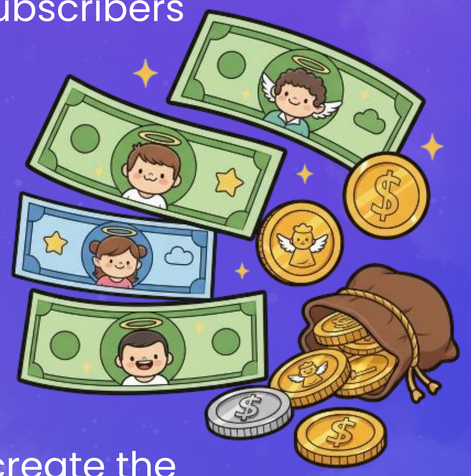
GAME PILL

Monetization

Freemium Access (Consumers) – Free users create and share basic avatars, while premium subscribers unlock advanced customization, learning features, and licensed characters like Spider-Man.



Microtransactions – Users pay to extend interactions, or purchase unique marketplace creations that are branded as popular characters (Spongebob) or fulfill a specific role (SAT training).

Enterprise Licensing / SaaS – Companies pay subscriptions to deploy branded or themed avatars for customer engagement, training, or interactive product demos. Game Pill helps to create the models and the visuals with higher fidelity outcomes (more animations, more voice controls, etc)

White-Label Solutions – Fully branded avatars, including licensed IP, can be embedded in websites or apps to deliver personalized experiences at scale.

Data & Insights – Enterprises receive privacy-safe analytics on avatar engagement, learning outcomes, and customer interactions.
